

Project: Utah Transit Authority -- Surface Transportation Research Initiative

Recipient: Utah Transit Authority

Location: Salt Lake City, Utah

Purpose: The Utah Transportation Center is proposing a multi-modal research and technology transfer effort that will cover transit, surface transportation systems, and land use issues. Divisions will be set up within the Utah Transportation Center to specifically address transit technologies (Applied Transit Technology Division); traffic engineering issues like congestion, Intelligent Transportation Systems (ITS), safety, geometric design, materials, and the inter-relationship between auto use and transit (Surface Transportation Systems Division); and land use issues directly related to multi-modal surface transportation systems (Land Use, Climate, and Sustainability Division), including research into creating sustainable communities and reducing the effects and impacts of global climate change.

Amount: \$2,500,000
